# process

maps (each has index + class code)  
 CLISTS ( " )  
 subprocesses ( " )

## Creation

g:ne

(list)

D,A,CNT file (readonly)

Cra cfl

D,A,CNT file (r,w)

mra mfl

pointer

Spva spfl

classcode

sub  
 1 process  
 2 map  
 1 c-list  
 1 subprocess

can modify

any object (map, clist, subprocess) (own process)

name by index

confirm by classcode

or within cra, cfl of (clist) (relative)

mra, mfl of map (relative)

of own subprocess

## other processes

read

create

## read

process

object, index - (process index of self in own process)  
(or ~~index~~ current active subprocess?  
or of current active s-subprocess?)

## read

within cra, cfl (relative)

mra, mfl (relative)

of own subprocess

need

memo on files

memo on process

memo on sync errors

memo on Async errors

memo on equal interruptions
