

# Option bit assignments

col'd 8/20/69

bit number	Event Channel	C-list	Operation	File	Sub-Process	Process
0	destroy	destroy	destroy	destroy	destroy	destroy
1	put event	copy into	add order	write	change map	interrupt
2	get event or hang	copy out of	copy	read	set p-counter	
3	get event or FRETURN	<i>use as subp local c-list</i>	change PS any $\leftarrow$ UDAT VCAP	place in map	set ESM	
4			change PS any $\leftarrow$ VCAP	add block	"create son" subprocess	
5			change PS UDAT $\leftarrow$ FDAT	delete block	<del>call</del> jump	
6			change PS UCAP $\leftarrow$ FCAP		<del>jump</del>	
7					jump return	
8					set temp part	
9					<i>use to name father subp</i>	
10					<i>can be named as interrupt subp</i>
